Skills & Interests

Languages: Python, C, R, Scheme, Bash, SQL.

Cloud/Infrastructure: Linux based data center, CI/CD, Docker, Networking (Network Layers, TCP/IP), Web template automation (Ansible).

Databases: SQL Server, SQLite, MySQL.

Version control/Project management: Git, Bitbucket, GitHub Actions, Agile, Jira, Confluence.

Big data processing/pipeline: PySpark, Dataframes.

QA/Quality: UAT, Regression Testing, Black Box Testing, Documentation.

Scripting: PowerShell, Excel Macros

Work Experience

StingerTech, Web Developer, Toronto June 2024 – September 2026

- Designed, assembled, configured and maintained local data centers and remote access solution for small businesses using TrueNAS scale, Scale Plugins, and WireGuard VPN.
- Designed, developed, deployed, and maintained AI companion demo for Wishplay.ca. AI startup focusing on elderly care and opportunities.
- Produced complete technical evaluation for small businesses comp rising of: technology research, system documentation, market analysis, network maintenance, data migration, and data analysis.

Toronto-Dominion Bank, Cloud/DevOps Engineer Co-op, Toronto May 2023 – Dec 2023

- Built Python/Jinja2 automation pipelines for Cisco NX-OS network configuration generation using Ansible templates, eliminating manual configuration effort for engineering teams.
- Created technical design documentation for branch networking solutions involving Zero-Touch Provisioning and enterprise network infrastructure (SilverPeak and Aruba/ClearPass).
- Applied networking concepts from Cisco enterprise infrastructure training (CCNA v2.0) to branch networking and automation workflows.
- Used Bitbucket version control workflows within infrastructure automation projects.

Toronto-Dominion Bank, Business Systems Analyst Co-op, Toronto Sep 2022 – Dec 2022

- Wrote scripts to migrate data, variables to Salesforce CRM system (Python, Excel macros, PowerShell), completely eliminating manual integration.
- Maintained and created clear documentation of migration project via Confluence/Jira, allowing for easier future development and troubleshooting.
- Collaborated with executive stakeholders to align business requirements with technical solutions.

ZeMaas Inc, IT Quality Assurance Analyst Co-op, Mississauga Jan 2022 – Apr 2022

- UAT, regression testing, and ticket management via Jira in 4+ applications in 15+ testing environments.
- Designing 20+ specification plans, containing acceptance criteria, documentation and test cases by setting criteria based on market research, aggregated user data and cost analysis on competing products.

- Contributing to application design by collating research and arranging UX wireframes in Adobe XD.

Toronto Transit Commission, IT Technical Specialist Co-op, Toronto May 2021 – Aug 2021

- Developing equipment failure database (Excel macros and SQL Server). Added and maintained additional device failure rate column with 500+ datapoints, allowing for more accurate diagnostics.
- Devised countermeasures and maintained order for various PC/Server hardware, software, related applications, and peripheral devices, clearing out 10% of the backlog.

Projects

Homelab Infrastructure / NAS Server

- Built and maintained TrueNAS-based infrastructure with automated shutdown workflows, remote VPN access, and secure file sharing using WireGuard, Bash, and Wake-on-LAN.

Discord Image Manipulation Bot

- Developed serverless Discord bot using Cloudflare Workers that performs dynamic image processing and custom expression parsing while integrating multiple external APIs.

Personal Website & Deployment Pipeline

- Designed and deployed personal portfolio website with automated CI/CD workflows using GitHub Actions, static site generation, and custom domain hosting.

Details can be found at garrickw.com/projects.

Education

University of Waterloo, Hon. Bachelor of Mathematics Co-op, Kitchener 2019 – 2024

Computer Science Minor

Relevant coursework

CS 436 – Networks & Distributed Systems (networking, systems support)

CS 430 – Applications Software Engineering (technical collaboration, system lifecycle)

CS 230 – Introduction to Computers and Computer Systems (computer hardware/software systems)

CS 338 – Databases (data management and operational systems)

CS 234 – Data Structures (technical problem solving)
